Analyte	Result	Unit	L	WRI	Н	Optimal Range	Reference Interval
Cortisol AM30	13	nmol/L	\rightarrow			14.0 – 25.0	7.0 – 30.0
Cortisol Noon	3.3	nmol/L	\rightarrow			5.0 – 10.0	2.1 – 14.0
Cortisol Evening	1.7	nmol/L	\rightarrow			2.0 - 5.0	1.5 – 8.0
Cortisol Night	3.6	nmol/L		\rightarrow		1.0 - 4.0	0.33 - 7.0
DHEA*	105	pg/mL	+				106 – 300

Hormone Comments

- The suboptimal diurnal cortisol pattern is consistent with evolving (Phase 2) HPA axis (adrenal gland) dysfunction.
- DHEA levels typically decline with age and the level measured here is below the reference range. Note: Supplementation with DHEA may increase testosterone and/or estradiol levels.

Notes:

The current samples are routinely held three weeks from receipt for additional testing.

RI= Reference Interval, L (blue) = Low (below RI), WRI (green) = Within RI (optimal), WRI (yellow) = Within RI (not optimal), H (red) = High (above RI)

*This test was developed and its performance characteristics determined by Doctor's Data Laboratories in a manner consistent with CLIA requirements. The U. S.
Food and Drug Administration (FDA) has not approved or cleared this test; however, FDA clearance is not currently required for clinical use. The results are not intended to be used as a sole means for clinical diagnosis or patient management decisions.

Methodology: Enzyme Immunoassay
