Hormone Comments:

- DHEA levels typically decline with age and the level measured here is below the reference range. The low DHEA level may warrant supplementation for optimal well-being. Note: Supplementation with DHEA may increase testosterone and/or estradiol levels.
- Diurnal cortisol pattern is consistent with established (Phase 3)HPA axis (adrenal gland) dysfunction.

Adrenal Phase: 3

Notes:

RI= Reference Interval, L (blue)= Low (below RI), WRI (green)= Within RI (optimal), WRI (yellow)= Within RI (not optimal), H (red)= High (above RI)
The current samples are routinely held three weeks from receipt for additional testing.
